

SAP & BEHAVIORAL HEALTH ASSESSMENT

Leveraging best practices and credible experience to improve your behavioral health framework

THE WHY

The Pennsylvania Commission on Crime and Delinquency requires that school entities **not meeting [Level One Criteria for SAP and Behavioral Health](#)** programming engage in an assessment of these programs with an approved external assessor.

We can help. Our work is grounded in evidence-based behavioral health practices, sound evaluation techniques, and significant experience with school entities of all sizes and resources.

THE HOW

Using the PCCD criteria and best practice standards for SAP, Behavioral Health, School Climate, Policy, and Training, we provide a comprehensive snapshot of the strengths and challenges facing your school entity. We recommend improvements and resources that make sense for your school entity's climate and culture.

- Utilize a mixed method design with quantitative surveys and qualitative structured interviews with key stakeholders. Where needed, we make site visits to understand the context of the schools further.
- Provide a report with strengths and ideas for resources and practical strategies to improve behavioral health practices in the school that can be submitted as part of the grant application.

THE DELIVERABLES

- Identify the practices that are effective
- Analyze needs and gaps that exist
- Collaborate with key stakeholders
- Develop an action plan for improvement

Let's Talk!
